FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Production and Marketing Administration; the Bureau of Agricultural Economics; the Citrus Inspection Bureau; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Canners' Association; the Florida Citrus Mutual; and the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

Shipments, unloads and other similar data for the 1951-52 season are subject to revision on account of late and corrected reports which are not yet available. Again, as in previous years, every effort has been made to include in the annual citrus summary data which will be of most value to the Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1951-52 SEASON

Daily market reports on citrus were issued at Lakeland, Florida from Oct. 15, 1951 to June 13, 1952, inclusive.

GENERAL COMMENTS

The 1951-52 Florida citrus season began with a double handicap. First there was a total crop in the hundred and twenty million box bracket (the second time that the State's production exceeded a hundred million boxes) and then there was a relatively heavy inventory of processed fruit from the previous season on hand to make the supply doubly impressive. To add further to the marketing problems, the crop was slow getting under way - either fresh or processed - particularly the latter. However, when Industry activity was at full swing, at every level, fresh and processed, all prior peaks and records were left far in the rear. The fresh fruit movement set an all time high by a wide margin. Combined cannery utilization for all Florida citrus was the highest on record, with oranges increasing sharply and frozen concentrate continuing its spectacular rise unabated. Consumer purchases of frozen orange concentrate attained such a high volume that each week's utilization was headline news. Within the past few years, the successful marketing of Florida's citrus crop has changed from a relatively simple fresh fruit program to an intricate coalition of fresh and processed citrus, processed inventories and carryovers. Consumer preference and resultant price differentials, together with competition from other fruits and juices (factors rarely considered in previous seasons) were increasingly important. In 1951-52, Florida's grapefruit crop was subject to many of these very influential contributing factors with devastating marketing effects. While it was a fact Florida had a large crop of grapefruit, the over-all volume wasn't excessive with Texas out of the picture and competition from California and Arizona grapefruit of minor extent. Fresh consumption and utilization were encouraging, but grapefruit used by the canners dropped to the second lowest volume in the past 10 seasons. Consumer-established price differentials, in conjunction with relatively low orange juice and orange concentrate

prices, resulted in a 'grapefruit for processing' price at the diminishing point during the latter part of the season (some monthly 'on tree' prices for processing channels were in the minus column) and three million boxes were left on the trees unharvested.

No attempt will be made to list the many developments, which at the time seemed paramount, but later faded into the background. Some of the most controversial factors were floor prices and maintenance of same (floor prices on early and mid-season oranges for processing were suspended as of Jan. 23, 1952); voluntary weekly shipping pro-rates (off and on, at times throughout the season with prominent industry authorities championing opposite views) and a widely publicized Government Hearing on proposed truck shipments of citrus direct from the grove (which was denied). Other proposals in the limelight included the varied 'surplus disposal' plans, controlled plantings and suggested increases in taxes for advertising and promotion. A simplified sizing project, which would decrease the number of packs materially, passed through the preliminary trial stages and could attain wide usage. Fresh fruit grades were strengthened and tightened.

'Mother Nature' assumed a hands-off policy throughout the 1951-52 season. There were no freezes, hurricanes or prolonged drought periods to cut the tonnage. All citrus production records for Florida were broken in 1951-52, with an increase of around fourteen million boxes above 1950-51 season (the first year Florida exceeded the hundred million mark). Florida's total 1951-52 production was placed at 119.4 million boxes - or 78.9 oranges, 36 grapefruit and 4.5 tangerines. Early and mid-season oranges accounted for 43.9 with Valencias 35 million boxes. Grapefruit was broken down into 17.5 seedless and a million more for 'other' or 18.5. Economic abandonment or fruit not harvested totaled one half million boxes of Marsh and two and one-half million 'other' grapefruit. There were 400,000 boxes of tangerines in the 'economic abandonment' column for the 1951-52 season.

All Florida citrus showed a substantial increase in fresh fruit shipments over a year ago. In fact, the total movement by rail, truck and express just missed the 100,000 car mark or the equivalent of 50,000,000 boxes. Total orange shipments reached 56,393 cars, grapefruit 35,772 and tangerines 6,634 for a grand total of 98,799. This was by far the heaviest shipments in the history of the Industry. Grapefruit showed the largest increase over the previous year or 26 per cent with oranges a close second accounting for 23 per cent. Tangerines were up only 8 per cent. Both oranges and grapefruit were shipped the year around or every month. Even the orange movement started in a small way the latter part of September 1951 and continued into September 1952. The equivalent of 187 cars of grapefruit was shipped the last week in September 1951 with scattering movement of old crop continuing into September 1952. The proportion moved by truck continued to increase, or 41,801 cars in 1951-52 compared to 30,902 a year ago. Thus the truck movement was up the equivalent of 10,899 cars in contrast to only 7,784 increase for rail. Beginning the first full week in November, or the week ending Nov. 10th and continuing thru May 24, combined fresh shipments of Florida citrus exceeded the million box mark consistently (excluding the Christmas shipping holiday week), with the peak weeks well over two million boxes. Through most of this period around a million and one-half figure was most common. After the tangerine movement dropped below one hundred cars the last week in February, oranges and grapefruit took up the slack and there were nine weeks immediately following with the total movement averaging over a million and one-half boxes weekly.

Despite an increase in total shipments of nearly 19,000 cars, there was only an increase of approximately 1,000 cars in auction offerings (excluding Temples) on the 10 auction markets or 23,030 compared to 22,072 a year ago - indicating more f.o.b business. New York City's combined auction offerings of Florida oranges and grapefruit were less in 1951-52 than in 1950-51, but midwestern markets such as Cleveland, Chicago, St. Louis, Cincinnati and Detroit more than made up the difference. Both New York and Philadelphia, however, showed increases in tangerine offerings over the preceding year. The average auction price for all oranges (excluding Temples) was 69¢ lower than a year ago or in 1950-51. Grapefruit, with some increase in high-priced Pinks and Indian River offerings exceeding Interior for the first time, showed up more advantageously or only 17¢ per box below last year's average. Tangerines reversed the downward trend with an average on 4/5 bu. boxes 7¢ higher than in 1950-51. Temples were 22¢ per half box lower than a year ago. Detailed seasonal auction averages for Florida citrus in 1951-52 follow: ORANGES - Interior $3.49, Indian River $3.85 and Temples (half boxes) $2.48. GRAPEFRUIT - Interior - Seed: white $2.90, pink $4.00, Seedless: white $3.32, pink $4.16; Indian River - Seed: white $3.60, pink $4.95, Seedless: white $4.13, pink $5.32. TANGERINES $2.63 per half box. Undoubtedly, a better measuring stick than the auctions for citrus returns in 1951-52 and 1950-51 will be found in tabulations on Florida Citrus 'on tree' prices, fresh and processed as reported by the Bureau of Agricultural Economics. Both early and mid-season oranges and Valencias in fresh channels returned approximately one-half as much in 1951-52 as compared to 1950-51, or 80¢ in contrast to $1.58 for early and mid-season oranges and 99¢ compared to $2.01 for Valencias. For processed oranges the decline was even more pronounced or 53¢ compared to $1.38 a year ago for early and mid-season and 86¢ in contrast to $1.79 for Valencias. On the same basis seedless grapefruit (including pinks) for the State as a whole held up remarkably well in fresh channels or 96¢ compared $1.30. Seed grapefruit, however, was only 59¢ as against $1.01. Grapefruit for processing showed the sharpest decline. The seasonal average for seeded fruit was 15¢ in contrast to 74¢ in 1950-51. Seedless, however, averaged only 7¢ a box in 1951-52 compared to 59¢ in 1950-51. Tangerines, in fresh channels made the best showing with $1.65 per 1 3/5 bu. boxes in 1951-52 as against $1.99 a year ago. For processing, however, tangerines were in the 'minus' column. Detailed 'on tree', F. O. B. and Cannery Prices are tabulated on Pages 15, 51 and 52 respectively.

Through the week ending Aug. 2, 1952 - Florida citrus used by canners was less than 1,000,000 boxes more than used in 1950-51 or 61,681,436 compared to 60,998,956. The nearly 62,000,000 boxes processed topped the 49,000,000 plus box fresh shipments by a substantial margin. With practically the same total figure for all citrus used by canners the past two seasons, the trends were directly opposite for oranges and grapefruit, with tangerines siding with grapefruit. Processed utilization of oranges increased approximately 5 1/2 million boxes - grapefruit dropped about 4 million boxes and tangerines were down by one half. As recent as 1945-46 the amount of grapefruit used by canners exceeded the orange volume, or 22.1 million boxes of grapefruit compared to 19.1 oranges. By 1951-52, grapefruit utilization had dropped nearly half or to 13.5 million, while oranges increase 2 1/2 fold or 47.4 million in 1951-52. Cannery volume picked up slowly early in the season. By the last week in December, oranges totaled only 6,671,367 boxes in contrast to over 9 million for the corresponding date in 1950-51. To the same date, grapefruit totaled only 2,781,271 as against 4,407,085 a year ago. However, as the season advanced and following the suspension of floor prices for early and mid-season cannery oranges, the weekly

utilization of oranges soon increased to around the two million mark weekly. During February, March and April, there were ten weeks with the weekly utilization around the two million figure. There were four weeks when two million boxes were exceeded. Grapefruit, on the other hand, reached only about half a million boxes during the peak weeks with many weeks in the three hundred and four hundred thousand box figures during March, April and May, together with December. The tangerine volume just exceeded 650,000 boxes for the season. Peak weeks generally were just prior to and following the Christmas holidays, with exception of one heavy week during the latter part of February.

According to actual rail unload figures in the 100 cities and the over all data on both rail and truck, the distribution of Florida citrus has improved generally for each successive season during the past four years and has become more equitable. Competitively speaking, the California orange movement eased off some, while Texas grapefruit was nil due to freeze. Through June 12, 1952 (based on the Florida gateways passings), the WEST (territory north of the Ohio River and West of the Mississippi River) received 14,464 cars of Florida citrus compared to 27,462 for the EAST or the eleven Northeastern States - or the 'west' received more than half of the 'east'. In 1947-48, a similar comparison showed that the WEST received less than 1/4 of the amount destined EAST. Rail distribution and actual unloads (rail) were obtained on 23,280 cars of oranges - 15,819 grapefruit - 2,378 tangerines and 9,186 mixed citrus for a grand total of 50,663 cars. Interstate truck distribution through June 30, 1952 and the most complete of any citrus season to-date totaled 23,162 cars of oranges, 13,068 grapefruit and 2,605 tangerines for a grand total of 38,835 cars. The combined total for all carriers equaled 89,498 cars compared to 71,079 in 1950-51 and 62,348 in 1949-50 - increases of 18,419 and 27,150 respectively. Undoubtedly, the most indicative and significant development in the fresh distribution has been the pronounced trend of increased volume to States, sections and districts which, in the past, have failed to account for anywhere near their proportionate share of Florida citrus. As an example - using Florida oranges with New York State in the populous 'east' as a barometer. During the past two seasons, New York received by rail 5,904 cars of Florida oranges in 1951-52 and 5,755 in 1950-51 or practically the same amount. Truck receipts were almost identical or 1,839 cars in 1951-52 and 1,830 in 1950-51. Missouri, as representative of the mid-west, indicated a most encouraging trend. The rail receipts of Florida oranges increased from 400 cars in 1950-51 to 482 in 1951-52, but the truck destinations increased more than 100 per cent or from 289 to 633 cars. This appears fairly typical of the sharp increase in 'long haul' loads by truck. Truck receipts of grapefruit in Iowa increased from 132 cars to 508 while Minnesota stepped up from 177 to 378 cars. Washington State increased rail receipts of Florida oranges from 25 cars to 169. Colorado's truck receipts of oranges and grapefruit increased respectively from 32 to 95 and 71 to 173 cars. In the southwest, Texas skyrocketed consumption of both Florida oranges and grapefruit with practically all of their supplies received via truck. Truck destinations of Florida oranges to Texas increased from 674 cars to 2,034 or more than three times, while grapefruit increased just a trifle higher percentagewise, or from 282 to 899 cars.

In comparing distribution with shipments, it should be kept in mind that rail destinations for cities and towns without unload information are not available before the Market News office on citrus was opened and after it was closed. Also unavailable were destinations on 4,286 cars of l.c.l mixed cars (consolidated into carlots) via express. Passings through the Florida gateways form the

basis of the rail distribution to towns and cities other than the 100 cities. Daily reports by the 'Guard Stations' at the Florida State line furnish the data for truck destinations.

CAR LOADINGS, FLORIDA CITRUS

The average rail load of Florida citrus during the 1951-52 season, as compiled by the Florida Citrus Exchange at Tampa, Florida was 500 boxes. Segregated: 1951-52 - oranges 503.8 grapefruit 497.8 and tangerines 481.9. The conversion factor of 500 boxes was used during the 1951-52 season for converting truck shipments to carlots.

CALIFORNIA AUCTION PRICES FOR 1951-52 SEASON

Detailed auction data for California citrus may be obtained from "A. E. Prugh, Market News Service, Production & Marketing Admin., U. S. Dept. of Agriculture, 300 Wholesale Terminal Building, Los Angeles, 21, California. There were no commercial shipments of citrus from Texas other than a few 'mixed' cars (express shipments of gift boxes) and very light truck movement.

Note: Carlot shipments (rail, boat & express) by weeks - oranges & tangerines, grapefruit and mixed citrus - were tabulated from the Washington weekly "Summary of Carlot Shipments".

MARKETING FLORIDA CITRUS
SUMMARY OF 1952-53 SEASON

by
H. F. Willson

Lakeland, Florida October 12, 1953

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Production and Marketing Administration; the Bureau of Agricultural Economics; the Citrus Inspection Bureau; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Canners' Association; the Florida Citrus Mutual; and the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

Shipments, unloads and other similar data for the 1952-53 season are subject to revision on account of late and corrected reports which are not yet available. Again, as in previous years, every effort has been made to include in the annual citrus summary data which will be of most value to the Industry. We have endeavored to includo basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1952-53 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 13, 1952 to June 12, 1953, inclusive.

GENERAL COMMENTS

During the first part of the 1952-53 season, or up until about the middle of December, Florida citrus conditions and prices were very similar to a year ago, or in 1951-52. However, following the December 10th estimate, the picture changed and oranges, with a sharp reduction in the estimated production figures and a strong cannery support, led the way in the most advance in prices. Grapefruit was next in line. Temples and tangerines (both exclusive Florida) followed in order. Undoubtedly, the most important contributing factor in Florida's over-all citrus developments was the strong delivered cannery orange market. The unprecedented consumer consumption of frozen orange concentrate at a rate of a million gallons weekly was most indicative. Commencing with this change and continuing throughout the season, orange prices (aided by a sound constructive program, both fresh and processed) advanced consistently with the season's averages, in all channels, far ahead of a year ago. The Christmas holiday trading, which started off slowly, picked up speed, and finished in a strong market position with late shipments relatively heavy. There was less than the usual price decline immediately following the holidays and hold-over supplies cleaned up better than ordinarily. In fact, for practically the entire marketing period, 1952-53 can be characterized by a well regulated marketing program, with no excessive 'ups' or 'downs'. The advance in orange prices, both fresh and processed, down to consumer levels, was consistent and steady with no sharp recessions of prominence or long duration. As the season advanced, Florida Valencias picked short of production expectations, but other citrus remained nominally unchanged.

Competitively speaking, California made the going 'rough' in fresh channels, with ample supplies of good quality Navels; and Mexican oranges (earlier in the season), with good consumer acceptance, at their price level, were in heaviest supply in Canada and also nearby western U. S. points - such as Texas and Oklahoma. Early, mid-season and Valencia oranges followed the same maturity pattern or were slow in reaching the high concentrate quality standard. In the spring and early summer, cool weather prevailed much later than normally (particularly the nights). The 'span' between volume utilization of mid-season and Valencia oranges, especially concentrate, was the longest on record. There was a period of three weeks in March, when cannery volume of oranges and grapefruit was practically identical - with grapefruit utilization topping oranges for the week ending Mar. 21st. At the close of the 1952-53 season, the inventory of processed citrus was comparatively low or the most favorable in years.

The 1952-53 season was the third successive year, that citrus production in Florida topped the 100,000,000 box mark by a substantial margin or totaled 110,200,000 boxes (preliminary estimate) for oranges, grapefruit and tangerines. For the United States, the combined orange production (including tangerines) was the tenth year in a row exceeding the 100,000,000 box mark, with the past three seasons ranging 120,000,000 to 125,000,000 boxes. In grapefruit, production was in reverse, with the heaviest five years being 1943-44 through 1947-48 and 1952-53's total United States, the lowest in thirteen seasons. This situation was the result of the temporary reduction of Texas grapefruit, which was down to a mere 200,000 boxes, in contrast to a normal production of over 20,000,000 boxes in recent years - or before the very severe cold damage in 1950. Florida, in 1952-53, produced 42,300,000 boxes of early and mid-season oranges - 30,500,000 Valencias - 4,900,000 tangerines - 17,200,000 seedless grapefruit and 15,300,000 other grapefruit, for a grand total of 110,200,000 boxes.

Total shipments of Florida citrus- rail, truck and express, were nearly 13,000 cars less than the heavy movement of 1951-52 or a total for 1952-53 of 85,993 compared to 98,791 cars. It should be noted, however, that 1951-52 was the heaviest on record. Total orange shipments (including the proper proportion of mixed cars) in 1952-53 amounted to 46,177 or approximately 10,000 cars less than a year ago. Grapefruit totaled 32,398 or nearly 3,500 cars less; while tangerines increased nearly 1,000 cars or amounted to 7,418 in 1952-53 in contrast to 6,634 in 1951-52. The proportion moved by truck continued to increase or totaled 41,758 cars - nearly 1/2 of the total movement. In fact, there were more oranges shipped by truck than by rail or 22,853 rail and 23,324 truck. The proportion for grapefruit was 17,421 rail and 14,977 truck; while tangerines showed 3,961 cars via rail compared to 3,457 by truck. The total of all amounted to 44,235 rail cars and 41,758 truck. It was not until the week ending Sept. 27th, that weekly grapefruit shipments exceeded 100 cars; while oranges started, in very light volume, the first week in October and, by the week ending Oct. 18th, reached a total of

220 cars. At the close of the season, grapefruit did not drop below 100 cars per week until the week ending June 27th, while oranges were well up in the three figure bracket all through June and averaged considerably over 100 cars for the first three weeks in July or through July 18th.

Auction offerings of Florida citrus (excluding Temples for the 1952-53 season just exceeded the 19,000 car mark or totaled 19,297 cars as compared to 23,030 a year ago. Oranges showed the greatest price gain over a year ago or .59¢ a box higher. Florida grapefruit (all varieties and sections) was next in line with an increase of .34¢ per box. Temple oranges were up .15¢ per half box over a year ago; while tangerines, with almost the same volume as last season, averaged .10¢ less per half box. The volume of Indian River grapefruit for all markets, both seed and seedless, white and pink, was 4,288 cars or more than 1/2 of Florida's offerings-with a continued increase of Indian River fruit to mid-western markets. Detailed seasonal auction averages for Florida citrus in 1952-53 season follow: ORANGES - Interior, $4.10; Indian River, $4.43 - TEMPLES - 1/2 boxes, $2.63 - TANGERINES - 1/2 boxes, $2.53. GRAPEFRUIT - Interior, Seed- white, $3.08, pink $4.56; Seedless- white, $3.62, pink $4.11 - Indian River, Seed- white $3.56, pink $4.82; Seedless- white $4.58, pink $5.31.

The combined 1952-53 cannery utilization of Florida oranges, grapefruit and tangerines was the largest on record or totaled 62,029,231 boxes; of which 45,826,606 boxes were oranges, 15,138,728 grapefruit and 1,063,897 tangerines. The total amount barely exceeded a year ago when 61,681,436 boxes were processed. Oranges in 1952-53 were less than last year, but the increase in grapefruit and tangerines more than offset oranges. Fifty-six percent of the combined total production of Florida oranges, grapefruit and tangerines was processed in 1952-53 - or 62.9% oranges, 46.6% grapefruit and 21,7% tangerines were utilized for processing.

Generally speaking, the distribution of Florida citrus, during the 1952-53 season, followed the pattern of the past three or four years, with the following exceptions: California Navels and Mexican oranges cut Florida's orange volume to the west. On the other hand, the tangerine volume increased to western points very materially. Grapefruit indicated the least change of any or was very similar to the wide distribution of 1951-52 season. For the first time, rail distribution to the smaller towns and cities was not made available, inasmuch as actual unloads in the 100 U. S. cities and 5 Canadian points account for over 90 percent of the rail volume. In addition to the unloads in 100 cities, actual truck receipts for 20 cities, supplement the usual truck distribution. Daily reports by the 'guard stations' at the Florida State line furnish the data for truck destinations. L. c. l. shipments of mixed citrus (consolidated into carlots) via express totaled 3,767 cars for the 1952-53 season.

CAR LOADINGS - FLORIDA CITRUS

The average rail load of Florida citrus during the 1952-53 season - through July 31st - as compiled by the Florida Citrus Exchange at Tampa, Florida was 496.9 boxes. Segregated: 1952-53 - oranges 503.5, grapefruit 493.5 and tangerines 473.7. Corrected-- 1951-52 - through July 31st, oranges 504.4; grapefruit 498.3; tangerines 481.9.

The conversion factor of 500 boxes was used during the 1952-53 season for converting truck shipments to carlots.

CALIFORNIA AUCTION PRICES FOR 1952-53 SEASON

Detailed auction data for California citrus may be obtained from "A. E. Prugh, Market News Service, Production and Marketing Administration, U. S. Department of Agriculture, 300 Wholesale Terminal Building, Los Angeles, 21, California."

Commercial shipments of citrus from Texas were very light during the 1952-53 season, and no daily or annual reports were issued.

Note: Carlot shipments (rail, boat & express) by weeks - oranges & tangerines, grapefruit and mixed citrus - were tabulated from the Washington weekly "Summary of Carlot Shipments".

MARKETING FLORIDA CITRUS
SUMMARY OF 1953-54 SEASON

by

H. F. Willson

Lakeland, Florida

September 30, 1954

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Citrus Inspection Bureau; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Citrus Mutual; the Florida Canners' Association; and the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

Shipments, unloads and other similar data for the 1953-54 season are subject to revision on account of late & corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary which will be of most value to the Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1953-54 SEASON

Daily market reports on citrus were issued at Lakeland, Florida from October 12, 1953 to June 4, 1954, inclusive.

GENERAL COMMENTS

Florida's 1953-54 total production of oranges, grapefruit and tangerines (approaching 140,000,000 boxes and approximately 20 million boxes above the previous high) set more new records. Processors, alone, accounted for nearly 84 million boxes, or slightly less than Florida's total production of 87,700,000 boxes just 4 seasons ago (1949-50). The total of fresh fruit shipments almost reached the 100,000 car mark or amounted to 95,821 cars, the equivalent of approximately 48 million boxes. Competitively speaking, Florida held a favored position. Texas still was in very low production, due to the 1951 freeze, but California had the lightest orange crop in 20 years, with adverse weather conditions cutting yields as the season progressed. Internationally, Spain suffered a most devastating freeze, affecting not only the 1953-54 crop but also immediate future production. This accelerated export volume and possibilities for all principal citrus producing areas in the United States. Florida, again, as in recent past seasons, had good distribution of fresh citrus, which moved into every State of the Union, as well as into Canada and Alaska, but was exceptional to the mid-west and west in general.

The 1953-54 season opened from 10 days to 2 weeks earlier than the previous year and continued well into August. Florida's combined movement (all carriers) of grapefruit did not permanently drop below 100 cars weekly until the week ending July 17th, while oranges totaled 127 cars for the week of July 24th and 94 cars for the week ending

July 31st. The State's total monthly shipments of oranges and grapefruit were never below a three-figure mark at any time during the shipping-period - or "year-'round" best describes Florida's citrus activities during the 1953-54 season.

Florida's final production data on citrus for 1953-54 season will not be available until Oct. 11, 1954. Latest figures (July 1st estimate) placed early and mid-season oranges at 50,200,000 boxes (including 2,200,000 Temples), Valencias at 40,800,000, tangerines 5,200,000, seedless grapefruit 22,000,000 and 'other' grapefruit 20,000,000 for a grand total of 138,200,000 boxes. Grapefruit, both seedless and other, along with tangerines, include some 'economic abandonment', which will be made available when final production figures are released in October. The State's total production for 1953-54 was more than generally anticipated at the beginning of the season. Prior to 1953-54, there had been only 3 seasons when the Florida total production exceeded the 100 million box mark - or 1950-51 through 1952-53 with the 1951-52 season high equalling slightly more than 119,000,000 boxes. California's orange production in 1953-54 was the lowest since 1933-34. The production of Texas grapefruit, while tripling 1952-53, was just over the million mark or totaled 1,200,000 boxes.

Shipments of fresh citrus were approximately 10,000 cars heavier than in the 1952-53 season when 85,991 cars moved. Grapefruit, showed the largest increase with a total of 38,391 cars compared to 32,405 a year ago. Oranges had an increase of nearly 4,500 cars or totaled 50,527, but tangerine shipments reversed the trend and dropped about 500 cars for a total of 6,903 compared to 7,418 cars in 1952-53. Trucks accounted for slightly over 1/2 of the movement or the equivalent of 48,941 cars on the basis of 500 boxes to the car. A year ago, or for the 1952-53 season, there was about the same numerical difference but the truck volume was less than the rail.

Offerings on the 10 auction markets of Florida oranges in the 1953-54 season were almost the same as a year ago, or totaled 8,696 cars at a weighted average of $4.33 per box compared to 8,765 cars at $4.19 in 1952-53. There was less than 100 cars difference but the 1953-54 season's average was up .14¢. Grapefruit, however, showed an increase of approximately 1,500 cars offered with the average declining .39¢ a box. Tangerine auction offerings dropped nearly 300 cars in 1953-54 but the average was up .32¢ per 1/2 box or the equivalent of .64¢ per 1-3/5 bu. box.

The cannery utilization was spectacular. Approximately 17 million more boxes of oranges were used than a year ago with grapefruit up about 5,000 boxes. Tangerines accounted for about the same volume as last season. There was a total of 15 weeks when processors used 2 million boxes plus of oranges weekly and 3 weeks in

succession of the 15 when the total was well over 2,900,000 boxes - just missing the 3 million mark. Grapefruit, during the heavier volume period, ranged generally from 1/2 million to 800,000 boxes weekly. There were only 2 weeks when the grapefruit total exceeded 800,000 boxes.

L. c. l shipments of mixed citrus (consolidated into carlots) via express, totaled 3,896 cars for the 1953-54 season.

CAR LOADINGS - FLORIDA CITRUS

The average rail load of Florida citrus, during the 1953-54 season, through Aug. 21st - as compiled by the Florida Citrus Exchange at Tampa, Florida - was 500.1 boxes. Segregated: 1953-54 - oranges 503.7, grapefruit 499.8 and tangerines 475.1.

The conversion factor of 500 boxes was used during the 1953-54 season for converting truck shipments to carlots.

CALIFORNIA AUCTION PRICES FOR 1953-54 SEASON -

Detailed auction data for California citrus may be obtained from "A. E. Prugh, Market News Service, Agricultural Marketing Service, U. S. Department of Agriculture, 300 Wholesale Terminal Building, Los Angeles, 21, California".

Commercial shipments of citrus from Texas were again light during the 1953-54 season, and no daily or annual reports were issued.

Note: Carlot shipments (rail, boat & express) by weeks - oranges & tangerines, grapefruit and mixed citrus - were tabulated from the Washington weekly "Summary of Carlot Shipments".

MARKETING FLORIDA CITRUS
SUMMARY OF 1954-55 SEASON

by
H. F. Willson

Lakeland, Florida

October 17, 1955

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Citrus Inspection Bureau; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Canners' Association; and the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

Shipments, unloads and other similar data for the 1954-55 season are subject to revision on account of late & corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary which will be of most value to the Industry. We have endeavored to include basis statistics suitable for comparisons with past seasons.

MARKET NEWS SERVICE ON FRUITS AND VEGETABLES

MARKETING FLORIDA CITRUS
SUMMARY OF 1954-55 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 5, 1954 to June 10, 1955, inclusive.

GENERAL COMMENTS

In 1954-55, Florida's production of oranges, grapefruit and tangerines was around 10 million boxes below the record season of 1953-54, but was still well above the average for the past five years. Fresh citrus shipments from the State dropped nearly 5,000 cars and the total via rail, boat and truck just exceeded 91,000 cars - with the volume by truck increased to more than 55 per cent of the total movement. As in recent years, processors again took the "lion's share" of Florida's citrus crop or 77.2 million boxes compared to 45.6 marketed through fresh channels. Although the total box cannery utilization of raw fruit was down materially, the extremely high yield resulted in nearly the same volume of finished products as a year ago. There was an excellent consumer demand for frozen orange concentrate and a record high consumption. Chilled juice made a sensational increase and accounted for more than 3,000,000 boxes of oranges. Crystals, a new product, went into commercial production - utilizing both grapefruit and oranges. Fresh citrus exports were the highest in recent years, or well over 1 million boxes. The auction volume showed further decline, with the total of oranges, grapefruit and tangerines equalling around 19,000 cars. The half-box carton, formerly used almost exclusively for export, increased very sharply in domestic usage. From a total of 1,305,266 box equivalents last year, the ½-box carton volume reached 2,841,969 in 1954-55. Competively, Texas grapefruit more than doubled the volume of 1953-54 and oranges increased 2/3 above the amount a year ago. There was no appreciable 'lag' or 'gap' at the beginning or end of California's Valencia and Navel seasons. California Navels made the Christmas market in volume, with the two consecutive heaviest weeks of the season ending December 4th and 11th.

Again, Florida's citrus season continued to show appreciable shipments every month of the year. The grapefruit movement started a little earlier than in 1953-54 and, by the last two weeks in September, were averaging over 100 cars a day. Oranges had reached a 100 car daily rate prior to the middle of October and did not drop below the 100 car weekly rate until in August. August still remains the lightest month of the season for the total citrus movement.

Florida's citrus production for 1954-55 season amounted to 51,800,000 boxes of early and mid-season oranges - 36,800,000 Valencias; 5,200,000 tangerines; 20,500,000 seedless and 14,300,000 'other' grapefruit; for a grand total of 128,600,000 boxes compared to 138,300,000 in 1953-54. Most of this reduction was in grapefruit, particular-the Duncan variety and in Valencias. Actually early end mid-season oranges and tangerines were slightly heavier than the preceding season. Valencias were over 3 million boxes less, with seedless down approximately 1 1/2 million and 'other' grapefruit 5.8 million boxes. Florida's 5-year average, prior to the bumper crop in 1953-54, totaled only 102,920,000 boxes. In connection with production, it is timely to note Florida plantings. For the year ending June 30, 1954 - oranges, tangelos and lemons set all-time records. The total for all citrus equaled 1,565,816 trees - second only to 1949-50 when 1,614,168 trees were planted. Grapefruit, with its critical marketing problems in both fresh and processed channels, was relatively light - or totaled only 158,372 trees or twelfth in ranking for the seasons 1928-29 through 1953-54.

Total shipments of fresh citrus, by rail, truck, boat and express (includ-the proper proportion of 'mixed' cars) were down approximately 4,500 from a year ago. Both oranges and grapefruit declined in about the same amount or around 2,700 cars each, but tangerines showed a marked increase or totaled 782 cars above the preceding season to establish an all-time record for fresh shipments. This was an opposite trend from 1953-54, when both oranges and grapefruit showed increases and tangerines declined. The percentage moved by truck continued to increase or totaled 55 per cent in 1954-55 compared to 51 per cent for 1953-54.

Offerings on the 10 auction markets of Florida oranges (exclusive of Temples) for the 1954-55 season through July 29th amounted to 6,835 cars, averaging $4.14 or a decline of .19 per box from the average a year ago. Grapefruit, likewise, had a lower auction average in 1954-55 or $3.70 per box compared to $3.83 the season before. There were 1,984 cars tangerines sold for an average of $2.66 per half box compared to $2.87 in 1953-54. Through the latter part of July, the auction volume of Florida oranges (excluding Temples), grapefruit and tangerines was comparatively much less than a year ago, or approximately 3,000 cars less. Temples, the exception, were almost idential in volume in 1954-55 or 1,456 cars as against 1,452 the preceding year.

Volume cannery utilization was slow getting under way, or one to two weeks later than a year ago. Through the first of January, 1955, oranges totaled 11,409,773 boxes in contrast to 14,880,897 for the corresponding date in 1954. Cannery grapefruit volume, through the same date in 1955, amounted to 3,791,273 boxes compared to 4,812,441 a year ago. Beginning in January, 1955 the orange utilization was high for the following two months, with the peak week of the season ending February 5th when 2,953,471 boxes were utilized. The peak week for grapefruit utilization occurred during the 'lull' between mid-season oranges and Valencias, or the week ending March 19th when 1,131,139 boxes were accounted for. The total amount of oranges, grapefruit and tangerines processed (approximately the same ratio as a year ago) amounted to 77,221,638 boxes compared to the fresh movement of 91,308 cars or the equivalent of 45,654,000 boxes.

Distribution of Florida citrus was again widespread, as indicated by the rail unloads in 100 U. S. cities and 5 Canandian cities and truck receipts in 21 cities. In rail unloads, such distant points as Butte, Mont., Tulsa, Okla., Portland, Ore., Seattle Spokane and Tacoma, Wash., received straight cars of Florida oranges. Grapefruit had even wider distribution to western points and included such cities as Denver, Salt Lake City and Los Angeles, in addition to cities listed for oranges. In the compilation of truck, it is interesting to note the long hauls in volume. For example: Dallas, Tex. received Florida citrus, by truck, in carlot equivalents, from September 1st, 1954 through June 30, 1955 as follows- oranges 251, grapefruit 184, tangerines 10 and limes 1. Denver, for the same period, via truck, totaled 138 cars of oranges, 252 grapefruit, 23 tangerines and 2 limes. Fort Worth received a grand total of 206 cars and Los Angeles 236. Last season, for the first time, the Lakeland office issued monthly reports on actual truck receipts of oranges, grapefruit, tangerines and limes in 21 cities by States of origin. Truck destinations, by cities, through the Florida gateways were discontinued. Beginning in 1955-56, the Lakeland office will release daily, rail and truck receipts of citrus for all States in 29 cities as compiled by Washington and plans are to increase the number of cities as funds can be made available.

L. c. l. shipments of mixed citrus (consolidated into carlots) via express, total 5,873 cars for the 1954-55 season.

CAR LOADINGS - FLORIDA CITRUS

The average rail load of Florida citrus, during the 1954-55 season, through August 20th - as compiled by the Florida Citrus Exchange at Tampa, Florida - was 502.3 boxes.

Segregated: 1954-55 - oranges 503.9, grapefruit 504.4 and tangerines 482.6, boxes.

The conversion factor of 500 boxes was used during the 1954-55 season for converting truck shipments to carlots.

CALIFORNIA AUCTION PRICES FOR 1954-55 SEASON

Detailed auction data for California citrus may be obtained from the 'Federal-State Market News Service, Agricultural Marketing Service, U. S. Department of Agriculture, 300 Wholesale Terminal Building, Los Angeles, 21, California.

Commercial shipments of citrus from Texas increased in 1954-55, but still light in volume and no daily or annual citrus reports were released.

ote: Carlot shipments (rail, boat & express) by weeks - oranges & tangerines, grapefruit and mixed citrus - were tabulated from the Washington weekly "Summary of Carlot Shipments".

MARKETING FLORIDA CITRUS
SUMMARY OF 1955-56 SEASON

by
H. F. Willson

Lakeland, Florida

October 15, 1956

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Citrus Inspection Bureau; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Citrus Mutual; the Florida Canners' Association; and the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida.

Shipments, unloads and other similar data for the 1955-56 season are subject to revision on account of late & corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary which will be of most value to the Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1955-56 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 17, 1955 to June 14, 1956, inclusive.

GENERAL COMMENTS

Florida's 1955-56 citrus crop topped the 130 million box mark for the second time in the history of the Industry by a substantial margin. Also, previous records were far surpassed in the all important net returns or 'on tree' prices. The market for oranges and tangerines was good from beginning to end. Grapefruit was the problem child again, but there was more concentrated effort to determine the reasons why, and much consideration given to steps necessary to bring it back to par with other Florida citrus. With higher standards than a year ago, the grapefruit movement, at the beginning of the season, was lighter but it caught up with the previous year's volume by late November. The gap or spread between the California Valencia and Navel orange seasons handed Florida the Thanksgiving market and shipments, while increasing by December, still left Florida in a favored position for the Christmas trade. Texas production was cut, due principally to unfavorable weather conditions at blooming time. Processing prices for Florida oranges, during the early and midseason, were relatively high. The fresh market on midseason oranges closed stronger than the opening prices for Valencias which was unsual. Valencias were slow in reaching the desired quality for frozen concentrate. Some of the recent season's pronounced trends showed continued increases - such as more volume shipped by truck and less by rail, a greater proportion of the crop processed in one form or another, and a smaller percentage consumed fresh. The continuing smaller amount of oranges consumed fresh, despite the greatly increased production, caused concern among some. A most damaging European freeze, particularly in Spain and in Italy gave the export business a sensational boost the latter part of the 1955-56 season that will continue for a number of years to come. The Mediterranean Fruit Fly menance raised its head again, or 27 years after the 1929 outbreak. In 1929, it was first discovered in the Orlando district, April 6th, while in 1956, it was in the Miami area on April 22nd. Prompt appropriations were made at both State and Federal levels. Improved methods of control and eradication were almost immediately placed into effect and progress of elimination was far ahead of the 1929 schedule. Also, throughout the 1955-56 season, an active program was in effect to control Spreading Decline. Weather, in the State, was also a most important factor, with rainfall below normal for the third consecutive year. Irrigation was started in some sections as early as October and November. Fortunately, there was rain in time to hold the bloom and set the fruit for the 1956-57 crop. The lack of rain, generally, resulted in many industry meetings and, finally professional 'rain makers' were hired to work some of the hardest hit drough stricken citrus counties during the heighth of the Valencia season. The 1/2-box carton volume continued to increase, being used extensively for export, and also increased very materially domestically, especially to the midwestern and far western markets. The chilled juice output, while slightly more than the previous year, did not reach the generally predicted optimistic forecast for the 1955-56 season. Potential over-all citrus production for Florida continued on its upward spiral with citrus plantings for the year ending June 30, 1955, the highest on record.

Citrus was again shipped from the State the year around. Oranges were in the 100 car figure, beginning the first week in October and stayed in this bracket until the last week in July. Grapefruit was in volume movement a couple of weeks earlier than oranges, but had dropped below the 100 car figure by the last week in July. The light month of year for Florida citrus continued to be August, but each season there is always some of the old crop moving at the beginning of the new crop's shipments.

Florida's total citrus production for the 1955-56 season placed early and midseason oranges at 51,500,000 boxes (including 2,800,000 Temples), Valencias at 39,300,000, tangerines at 4,600,000, seedless grapefruit at 20,700,000 and other grapefruit (or Duncan) at 17,800,000 for a grand total of 133,900,000. This preliminary total is the second highest in the production column for Florida citrus - being exceeded only by the 1953-54 season, when the total production amounted to 138,300,000 boxes.

1955-56 and 1953-54 were the only two seasons, when Florida's citrus production exceeded 130,000,000 boxes. In connection with production, it is interesting to note the trend in plantings of citrus trees in the State. For the year ending June 30, 1955, plantings of all citrus exceeded the previous record by more than 300,000 trees, or totaled 1,926,829 trees. Oranges increased nearly 350,000 over the year before, but grapefruit was down nearly one-half or dropped from 158,372 in 1953-54 to 90,426 in 1954-55. Mandarins increased more than 50,000, lemons more than doubled, but other classes such as limes and tangelos showed less change.

Total shipments of fresh citrus, by rail, truck, boat and express (including the proper proportion of 'mixed' cars) were down again approximately 4,000 cars, despite the increased production. In 1955-56, total shipments equalled 87,405 cars compared to 91,401 in 1954-55. Oranges showed the most change or amounted to 44,173 compared to 47,987 cars a year ago. Tangerines also declined to totaled 6,988 cars compared to 7,685 the year before. Grapefruit, however, was approximately 500 cars more in 1955-56 or 36,244 in contrast to 35,729 in 1954-55. The percentage moved by truck continued to increase, or amounted to 57 percent of the total compared to 55 percent a year ago and 51 percent two years ago.

Auction sales of Florida citrus were substantially higher, particularly for regular oranges and tangerines. Offerings on the 10 auction markets through July 27th, 1956, were lighter in volume with no exception. Oranges (exclusive of Temples) Totaled 5,500 cars, grapefruit 7,361, tangerines 1,740, and Temples 1,118, for a grand total of 15,719 cars. The seasonal auction averages, as compared to a year ago, were as follows: Oranges averaged $4.76 a box compared to $4.14 in 1954-55, or 62¢ higher; grapefruit averaged $4.01 compared to $3.70, an increase of 31¢; tangerines averaged $3.11 in contrast to $2.66, or up 45¢ on a 1/2 box; and finally Temples with an average of $2.64 in 1955-56 compared to $2.52 the previous season, or 12¢ higher per 1/2 box.

Combined cannery utilization of Florida citrus broke all records, with a grand total of 84,512,623 boxes used - segregated as follows: Oranges 64,856,828 boxes, grapefruit 18,648,422, tangerines 982,603 and tangelos 24,770. It was not until the week ending Nov. 5th that the accumulative total for oranges exceeded 1,000,000 boxes but, by the middle of December, the weekly cannery utilization was exceeding 2,000,000 a week and throughout January the average weekly utilization was in excess of 3,000,000 boxes. Beginning in early February, there was a consistent decline in volume utilized as midseason oranges cleaned up and Valencias had not reached the desired quality for concentrate. The low for this period was the week ending Mar. 31st and it was not until May that the orange utilization reached its Valencia peak. Grapefruit utilization, by Jan. 1st, totaled nearly 4 million boxes, with the weekly total the latter part of November and during December in the 400,000 box bracket. Throughout January, February and the first part of March, usage ranged from 700,000 to nearly 900,000 boxes weekly. The peak week of the 1955-56 grapefruit utilization (and incidently the only one exceeding 1,000,000 boxes) was the week ending Mar. 17th, when 1,187,322 boxes were accounted for. Beginning in April, there was a general weekly decline in volume utilized (with few exceptions) throughout the remainder of the season.

Distribution of Florida citrus in 1955-56 again was very wide spread. Florida's rail unloads in '100 Cities' Sept. 1, 1955 through June 30, 1956 amounted to 9,957 cars; oranges; 9,948 grapefruit; 1,870 tangerines; and 4,718 'mixed' citrus for a grand total of 26,493 cars. Actual truck receipts of Florida citrus in 23 cities for the same period was surprisingly heavy or amounted to 8,122 cars oranges; 7,311 grapefruit; 1,484 tangerines and 169 limes for a grand total of 17,086 carlot equivalents. Many far western cities received Florida citrus in liberal quantities. For examples - Dallas, Tex. actual truck receipts from Florida totaled 283 oranges, 232 grapefruit, 33 tangerines, and 6 Limes - Denver, Colo. (during the same period) received 132 cars oranges; 314 grapefruit; 31 tangerines and 3 limes. Forty six States, the Dist. of Columbia and five Provinces in Canada received Florida citrus by truck, as tabulated from the road guard station passing reports.

L. c. l. shipments of 'mixed' citrus (consolidated into carlots) via express totaled 5,116 cars for the 1955-56 season.

The average rail load of Florida citrus thru Aug. 25, 1956 (as compiled by the Florida Citrus Exchange at Tampa, Fla.) was 408.4 boxes. Segregated: 1955-56 season - oranges 510.4, grapefruit 508.3 and tangerines 496.7 boxes.

The conversion factor of 500 boxes was used in converting truck shipments to carlots.

Detailed auction data for California citrus for the 1955-56 season may be obtained from the Federal-State Market News Service, Agricultural Marketing Service, U. S. Department of Agriculture, 300 Wholesale Terminal Building, Los Angeles 21, California.

Commercial shipments of citrus from Texas continued light in 1955-56. There was a slight increase in the Texas truck movement. Rail shipments were less than in 1954-55. L. c. l. shipments of mixed citrus (consolidated into carlots) via express totaled around 400 cars. No daily or annual citrus reports were released in 1955-56.

ote: Carlot shipments (rail, boat & express) by weeks - oranges & tangerines, grapefruit and mixed citrus - were tabulated from the Washington weekly "Summary of Carlot Shipments".

MARKETING FLORIDA CITRUS
SUMMARY OF 1956-57 SEASON

by
H. F. Willson

Lakeland, Florida October 2, 1957

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Foreign Agricultural Service; the Citrus Inspection Division, Florida Department of Agriculture; the Florida Citrus Commission; the Florida Citrus Mutual; the Florida Canners' Association; the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida; and the State Plant Board of Florida.

Shipments, unloads and other similar data for the 1956-57 season are subject to revision on account of late & corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary which will be of most value to the Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKET NEWS SERVICE ON FRUITS AND VEGETABLES

MARKETING FLORIDA CITRUS
SUMMARY OF 1956-57 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 15, 1956 to June 21, 1957, inclusive.

GENERAL COMMENTS

With Florida's 1956-57 citrus production one of the largest crops on record, and the largest for oranges, the State had the lightest fresh fruit shipments in the last six years, and came up with some of the most interesting developments in many a season. In the first place, oranges did a complete 'about face' with the best market and the highest prices on early and midseason fruit in contrast to the lowest Valencia returns in years. Secondly, grapefruit, the problem child of 1955-56, came through with flying colors at all price levels. Then tangerines, with a near record crop and an increasing volume of the much publicized late variety, showed an improvement in price returns. The tangerine crop was plagued by small sizes generally, and there was cold damage in some areas. Exports, while accounting for only a mere trifle of the total orange crop and with no subsidy, was one of the key factors for the best continuous active orange market through 1956. Higher standards and stricter regulations, at beginning of the season, got all Florida citrus off to a good start. Quality was the most discussed topic of the year and continued rightly so, due to its major importance in successful marketing. Orange concentrate started the 1956-57 season with the heaviest carry-over in history and, during the Valencia marketing period in particular, there were very pronounced price changes at all levels. In the latter part of the season, Mexico with surprisingly good quality oranges, handled by experienced packers and carrying well, took over much of Florida's expected export volume. Chilled citrus juice, mostly orange, and often referred to as Florida's 'citrus darling', increased its volume sharply. For the first time, boat shipments were made to New York City, from which point the product was distributed to 11 States and Canada. There was no appreciable lag between California's Valencia and Navel seasons or between Navels and Valencias, particularly the latter. California Navels were in volume for the Christmas Trade. The Mediterranean Fruit Fly, at the close of the season, was only a minor problem, due to the very effective eradication program. The 'Spreading Decline' work continued throughout the season. Florida's weather reversed itself after three very pronounced subnormal dry years and there was ample rainfall during the Spring and Summer months. The winter, while generally warm, produced three cold snaps occurring in November, December and January, just far enough apart to flush new growth and resulted in heavy young tree damage in some areas. Florida continued to plant citrus heavily, with the June 30, 1956 report showing the largest number of plantings on record. The Florida Legislature passed an industry approved increased tax on oranges for advertising from 3¢ per box to 5¢.

Citrus continued to be shipped or marketed from the State the year around. In recent seasons, there has been an increasing over-lapping of the old crop with the new. Orange shipments were in the 100 car bracket and higher, beginning with the first week of October and continued through the last week in July, with some weeks in August closely approaching the 100 car mark. Grapefruit reached this volume a week earlier or the last week of September and continued through the second week in July.

Florida's preliminary total citrus production figures for the 1956-57 season placed early and midseason oranges, including Temples, at 54,300,000 boxes; Valencias at 39,000,000; tangerines at 4,800,000; seedless grapefruit at 21,500,000 and other grapefruit at 15,800,000, for a grand total of 135,400,000 boxes. This was the third season that Florida's citrus production exceeded the 130,000,000 box mark - the other two years being 1953-54 and 1955-56. The 1953-54 season still holds the all time record with 138,300,000 boxes, closely followed by 1956-57 with 135,400,000 and 1955-56 season with 134,000,000 boxes. Plantings continued at a record rate, with nearly two million citrus trees planted during the year ending June 30, 1956. As in recent years, oranges led with grapefruit again declining. This decline in grapefruit plantings has been continuous for the past six years. Other citrus showing declines in plantings from the previous year were limes, lemons and tangelos.

Again, Florida's total shipments of fresh citrus by rail, boat and express including the proper proportion of 'mixed' cars, declined at an accelerated pace, despite the increased production. In 1956-57, the decline was more than 6,000 cars from the 1955-56 total and the 1955-56 total was about 4,000 cars less than the year before, or in 1954-55. Therefore, the 1956-57 fresh movement of Florida citrus was more than 10,000 cars under the 1954-55 season total. The 1956-57 fresh citrus shipments totaled only 81,190 cars compared to 91,401 in 1954-55. Oranges, again, as a year ago, showed the most decreased for the season or approximately 3,500 cars loss; with grapefruit around 2,500 cars under the 1955-56 total. Tangerines all but held with the past season's performance, with a decrease of less than 300 cars from 1955-56. The percentage of fresh citrus moved by truck, however, continued its upward trend and, in 1956-57, amounted to slightly more than 60 per cent of the total shipments compared to 57, 55, and 51 per cent, respectively, for the three previous seasons.

All auction sales of Florida citrus were higher in 1956-57 than the year previous, or in 1955-56, with the exception of oranges, which averaged 27¢ per 1-3/5 bu. box lower. Offerings for the nine auctions (Baltimore officially closed at the end of the year 1956) were less than the year before, in line with the general decrease in the fresh movement of Florida citrus. Oranges (exclusive of Temples) totaled 4,970 cars, grapefruit 6,647, tangerines 1,555 and Temples 1,090, for a grand total of 14,262 cars. Seasonal auction averages, as compared to a year ago, were as follows: oranges averaged $4.49 a box compared to $4.76 in 1955-56; grapefruit averaged $4.41 in contrast to $4.01, an increase of 40¢; tangerines averaged $3.29 compared to $3.11, or up 18¢ per half box; and finally Temples averaged $2.72 per half box in contrast to $2.64 a year ago, or 8¢ higher.

The combined cannery utilization of Florida citrus, in 1956-57, broke all previous records, with a grand total of 88,194,509 boxes used; segregated as follows: oranges 67,830,770 boxes; grapefruit 19,049,820; tangerines 1,264,449; and tangelos 49,470. It was not until the week ending Nov. 10th that the accumulated total for oranges exceeded 1,000,000 boxes; with grapefruit reaching the same goal the following week, or the week ending Nov. 17th. Cannery utilization of oranges increased rapidly and, by the first week in December, exceeded the weekly mark of 1,500,000 boxes. Utilization continued to increase and, by the second week of the new year 1957, topped 3,000,000 boxes. In fact, during the season, there were five weeks when cannery utilization of oranges exceeded the 3,000,000 box mark with four weeks in succession, the last of January and the first part of February. It was not until the latter part of March that the orange utilization dropped below the 1,000,000 box mark, and then only for four weeks, which occurred during the lull between the midseason fruit and Valencias. Beginning the week ending Apr. 20th and continuing through June 29th, the weekly orange utilization was well above the 1,000,000 box mark and, in most weeks of this period, exceeded 2,000,000 boxes weekly. Grapefruit, from the middle of November until the middle of May, ranged generally from 300,000 to around 800,000 boxes weekly. The exceptions were the last three weeks in March, when the volume each week exceeded 1,000,000 boxes. This was the period when the concentrate utilization of midseason oranges was practically completed and the usage of Valencias was as yet not in volume.

As in previous recent seasons, Florida fresh citrus was shipped to practically every state in the U. S. Rail unloads in the 100 cities, Sept 1, 1956 through June 30, 1957, totaled 7,913 cars oranges, 8,366 grapefruit, 1,682 tangerines, and 4,096 'mixed' cars of citrus. Truck distribution for the period Oct. 1, 1956 through May 31, 1957 (as tabulated by the Florida Citrus Commission) accounted for the equivalent of 21,631 cars of oranges; 17,132 grapefruit and 3,430 tangerines, exclusive of Canada. Some of the more distant cities received a surprising volume of Florida citrus. By truck, Los Angeles received 208 carlot equivalents of grapefruit and San Francisco 40 cars from Florida. By rail, Vancouver, B. C., accounted for 186 cars of Florida grapefruit and such cities as Dallas, Tex., and Denver, Colo., received relatively liberal supplies of grapefruit from the State. The truck distribution alone, shows Florida citrus destined to 46 States, the District of Columbia and many Canadian points, both east and west. State road guard stations passing reports furnish the basis of the Florida truck distribution data.

L. c. l. shipments of 'mixed' cars (consolidated into carlots) via express totaled 5,299 cars of citrus for the 1956-57 season.

The average rail load of Florida citrus through Aug. 31st, 1957 (as compiled by the Florida Citrus Exchange at Tampa, Fla.) was 510.4 boxes compared to 508.4 boxes in 1955-56. Segregated: 1956-57 season - oranges 514.0; grapefruit 510.1; and tangerines 492.1.

The average rail load thru Aug. 25, 1956 was 508.4 boxes - segregated oranges 510.4, grapefruit 508.3 and tangerines 496.7.

The conversion factor of 500 boxes -- used in converting truck shipments to carlots.

Detailed auction data for California citrus for the 1956-57 season may be obtained from the Federal-State Market News Service, Agricultural Marketing Service, U. S. Department of Agriculture, 300 Wholesale Terminal Building, Los Angeles, California.

Commercial shipments of citrus from Texas continued light in 1956-57, or about the same as in 1955-56. L. c. l. shipments of mixed citrus (consolidated into carlots) via express totaled 381 cars. No daily or annual citrus reports were released for Texas in 1956-57.

MARKETING FLORIDA CITRUS
SUMMARY OF 1957-58 SEASON

by
H. F. Willson

Lakeland, Florida October 15, 1958

631 18
F636ma
1957/58

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Foreign Agricultural Service; the Citrus Inspection Division, Florida Department of Agriculture; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Citrus Mutual; the Florida Canners' Ass'n; the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida; and the State Plant Board of Florida.

Shipments, unloads and other similar data for the 1957-58 season are subject to revision on account of late & corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary which will be of most value to the Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1957-58 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 9, 1957 to May 26, 1958, inclusive

GENERAL COMMENTS

Winter weary Florida, despite the three coldest consecutive months of December, January and February on record, during the 1957-58 citrus season, still accounted for 75% of the previous season's fresh fruit shipments. Processors took a whopping 92% as much fresh citrus as they did a year before. Losses, however, were heavy in many groves throughout the State. Preliminary 1957-58 production figures for Florida oranges, grapefruit and tangerines totaled 115.9 million boxes compared to the pre-freeze first U. S. estimate on Oct. 1, 1957 of 144.5 million boxes and the 1956-57 crop of 135.2 million boxes. Utilization of both fresh and processed fruit mostly kept pace with the previous year (and in some instances increased) until well along in the season or the late Spring months. Tangerines and similar varieties, highly susceptible to cold damage, were hardest hit in utilization, with the tangerine fresh movement only slightly more than one-half the previous season and processed only about one-fourth. Volume movement of fresh citrus from the State started early and ended at the earliest date in more than 25 years.

There were five major low temperature periods - one, the first part of December; one, in January; and three, in February. Fortunately, the weather did not warm up rapidly following the below freezing readings but, generally, remained cool to cold for the entire three months. Consequently, the proportion of citrus which could be utilized was extremely high, in fact phenomenal. Any prolonged spell of extremely high temperatures following the freezes would have resulted in a higher percentage of spoilage. Precautionary measures taken by the Industry to protect Florida's citrus reputation in the markets deserve much credit. Immediately following the first freeze in December, a Statewide 'embargo' was placed in effect, which overlapped the customary 'shipping holiday' at Christmas time. This provided time to better evaluate the losses and chart further procedure. Throughout the season, action was taken when necessary to make sure the consumer was offered a desireable quality product, whether in fresh or in one of the many processed forms.

Seasonal prices in all channels were fantastically high. For example: average auction prices for the season on Florida oranges were the highest in 30 years. Grapefruit auction offerings ran heavy from the Indian River District and averaged the second highest in 33 years. The relatively light tangerine offerings at auction sold at the highest average price on record. Delivered cannery prices, as released by the Florida Canners' Association, show an 80¢ per box increase over 1956-57 on oranges for concentrate, with juice oranges for the season 44¢ more. The U. S. orange crop was the smallest since 1949-50 with Florida the lightest since 1952-53 and California the smallest since way back in 1929-30. Despite the smaller crop and very high prices, consumption held at a high rate, due largely to quality products, together with the cumulative results of the advertising and promotional work, which the Industry has done on Florida citrus for almost 25 years.

For the first time in history, both imports and exports were, at times in the limelight. Before winter closed in, the export demand for Florida citrus at satisfactory prices (without subsidy) gave the orange market a much needed boost early in the season; and some imports of oranges - principally Cuban and a few Mexican - were used by processors late in the season. A new outlet was created when Germany started buying frozen orange concentrate in barrels, reconstituting to natural strength and selling as chilled juice. Another development was the use of California oranges, imported into Florida for chilled juice prior to the availability of Florida oranges from the new 1958-59 crop.

Following last winter's record cold weather, a survey made in late April, 1958 - covering more than one-half million trees - indicated about 75% of bearing orange trees, 81% of bearing grapefruit trees, and 79% of bearing tangerine trees, escaped with minor to no damage. Special research funds have been appropiated by the State and Federal Governments for various projects, including development of cold resistant root stocks.

There was an over-lapping of the 1956-57 season with that of 1957-58. It was very pronounced and the previous season extended into 1957-58 - both fresh and processed as late as October. At the close of the 1957-58 season, however, it was an entirely different story in that the volume wind-up was the earliest since 1929-30. For oranges, the combined rail and truck (with the proper proportion of 'mixed' citrus) dropped below the 100 car weekly figure the second week in June. The combined rail and truck volume for grapefruit dropped below the weekly 100 car figure sooner, or during the week ending May 31st. Tangerines were far below the 100 car weekly figure by all means of transportation (including the proportion of 'mixed' cars) for the week ending Jan. 18th.

For the first time in history, the Oct. 1, 1957 Government estimate placed Florida's orange production figures for the 1957-58 season (including Temples) above the one hundred million box mark, or at 102,000,000 - classified as follows: Temples 3,000,000; other early and mid-season 56,000,000 and Valencias 43,000,000. However, the July 1, 1958 production figures for Florida oranges (following the disastrous cold winter) was 82,500,000 boxes, made up of 1,500,000 Temples; 51,500,000 early and mid-season and 29,500,000 Valencias - which places the 1957-58 season production of oranges the smallest crop since 1952-53 or in the past 5 years. Production of Florida tangerines was just about one-half the normal crop. Grapefruit production figures July 1, 1958 was down to 31,100,000 boxes or the lowest since 1949-50. For the United States, as a whole, the comparison is more pronounced, with oranges including tangerines, the smallest since 1949-50 and grapefruit, the lightest since 1952-53. Citrus plantings for the year ending June 30, 1957, showed a substantial increase over the previous year, with a combined total for all varieties and classes well over the 2 million mark or 2,195,035 trees. Oranges again increased with grapefruit declining. This decline in grapefruit plantings has been continuous for the past seven years. Other citrus, showing declines in plantings from 1956 were mandarins, tangelos and limes.

Florida's total shipments of fresh citrus by rail, truck, boat and express (including the proper proportion of 'mixed' citrus) declined approximately 20,000 cars from the 1956-57 volume or totaled only 60,932 cars; segregated - oranges 30,084; grapefruit 26,439 and tangerines 3,689 cars. Oranges alone declined 10,000 cars from the previous season, grapefruit 7,000 and tangerines 3,000 cars. Compared to a year ago, oranges were down one-fourth, grapefruit about one-fifth and tangerines nearly one-half.

Seasonal auction averages for Florida citrus either set or practically equalled all time records, or were the highest in 30 odd years. Oranges, with an average of $5.57 per box was in a class by itself, with the exception of 30 years ago, when the seasonal average was just 5¢ more or $5.62 per box. The nearest other season in price was 1949-50 with an average of $4.85. The grapefruit seasonal average was the second highest in 33 years. 1949-50 was higher or averaged $5.04 per box, with the 1957-58 season just 13¢ a box lower or $4.91. Tangerines, with seasonal averages available only 31 years back, was an all time record and substantially higher than any previous season. The next highest seasonal price was only a year ago, or 1956-57, with an average of $3.29 or 75¢ per half box lower than the 1957-58 seasonal average of $4.04. Temples, which have only been separated from oranges in recent seasons, or since 1949-50, exactly duplicated the previous high seasonal average of 1949-50 or $3.13 per half box - $6.26 per full box.

The combined cannery utilization of Florida citrus in 1957-58 was unbelievably high or undisputable evidence of the most thorough job turned in by all processors under abnormal conditions. The utilization of all citrus totaled 81,350,746 boxes or namely - 64,490,347 boxes of oranges; 16,509,264 boxes grapefruit and 351,135 boxes of tangerines. In 1956-57, the grand total was less than 7,000,000 boxes more or 88,194,509. In contrast to a normal season, when volume cannery activity continues well into July, or at least through June, utilization in appreciable quantity ceased by the end of May, 1958. For oranges, there were three weeks when the utilization exceeded 4,000,000 boxes weekly-an all time record. In fact in one of these weeks, the total was nearly 4,500,000 boxes or for the week ending Jan. 18th. There were four weeks exceeding 3,000,000 boxes. It was not until the last week in November, 1957 that the cannery usage of oranges exceeded the 1,000,000 box mark and continued above this figure until the middle of May, 1958. The volume dropped sharply to 576,169 boxes for the week ending May 24th. The week following was at about the same volume but, during June and July, the quantity was very light. The heavy weeks for grapefruit occurred mostly after oranges began to decline. For six consecutive weeks, beginning the week ending Feb. 1st and continuing through the week ending Mar. 8th, the volume was above 1,000,000 boxes weekly. The peak week was the one ending Feb. 22nd, when slightly over 1,500,000 boxes were used. The tangerine utilization was very light on account of the freezes, with only slightly more than one-fourth used as compared to 1956-57 season or 351,135 boxes in contrast to 1,264,449 a year ago. The peak week for the 1957-58 season was the one ending Dec. 14th with 97,570 boxes utilized.

Florida citrus continued to be distributed in fresh form to practically every state in the U. S., in addition to fresh exports to many foreign countries. Rail unloads in 100 cities, Sept. 1, 1957 through July 31,1958 totaled 6,551 cars oranges; 7,082 grapefruit; 812 tangerines and 3,112 cars of mixed citrus. Actual truck unloads in 39 U. S. cities for the same period totaled 10,161 carlot equivalents for oranges; 8,626 grapefruit and 1,375 tangerines. In addition, 1,326 carlot equivalents of Florida citrus were trucked to the 5 principal Canadian cities. Complete interstate truck distribution for the period Sept. 1, 1957 through May 31, 1958 (as tabulated by the Florida Citrus Commission) accounted for the equivalent of 17,761 cars of oranges; 14,243 grapefruit and

1,917 tangerines, exclusive of Canada. In this complete Interstate Truck Distribution Report, a total of 46 States and the District of Columbia were represented. State road guard stations' passing reports furnish the basis of the Florida truck distribution data. Truck unloads of Florida citrus in distant cities include Ft. Worth and San Antonio, Texas; Los Angeles, San Francisco and Oakland, California; Denver, Colorado; Salt Lake City, Utah and Portland, Oregon.

L. c. l. shipments of 'mixed' cars (consolidated into carlots) via express totaled 2,807 cars of citrus for the 1957-58 season.

The average rail load of Florida citrus for the 1957-58 season (as compiled by the Florida Citrus Exchange at Tampa, Fla.) was 529.0 boxes compared to 510.4 boxes in 1956-57. Segregated: 1957-58 season - oranges 539.1; grapefruit 521.0; and tangerines 518.5.

The conversion factor of 500 boxes -- used in converting truck shipments to carlots.

EMBARGO
FLORIDA CITRUS COMMISSION

Section 1. For the period of 7 days beginning at 7 A.M., Tues., Dec. 17, 1957, & ending at 7 A.M., Dec. 24, 1957, no citrus fruit in the State of Florida shall be sold or offered for sale, transported for any purpose whatsoever, other than diversion from all channels of human consumption, prepared, received, or delivered for transportation or market, except at canning plants for the purpose of processing.

CITRUS SHIPPING HOLIDAY - This regulation will prohibit the shipment of all varieties of oranges, grapefruit, tangerines and tangelos between the production area and any point outside thereof in the Continental U. S., Canada or Mexico, from 12:01 a/m, e.s.t., Dec. 22, 1957 to 12:01 a/m, e.s.t., Dec. 30, 1957.
By Growers Administrative Committee, Lakeland, Florida

Detailed auction data for California citrus for the 1957-58 season maybe obtained from the Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles, Calif. Commercial shipments of citrus from Texas continued light in 1957-58. L. c. l. shipments of mixed citrus via express from Texas totaled 429 cars.

"Character of the 1957-58 Season

Cold and wet weather with occasionally strong winds, from December through February; and cool, wet weather in March, was the adverse weather picture. The average temperature for December, 1957 - January and February 1958, was the coldest ever recorded in Florida for any three consecutive months. Lower minimum temperatures, however, have been recorded in previous seasons. Lowest temperatures of this season: 15° to 20° at many stations in northern districts and 18° to 24° at many stations in the central districts on the morning of December 13. In the southern districts, the lowest temperatures for the season occurred on the morning of Feb. 4, with temperatures of 20° to 25° in the backlands of the Everglades and 24° to 29° in the lower East Coast farming areas. Rainfall was well above normal in all sections. Some areas, especially in the southern and west coast districts, measured from 20 to 30 inchdes for the season."

1958/59

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Foreign Agricultural Service; the Citrus Inspection Division, Florida Department of Agriculture; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Citrus Mutual; the Florida Canners' Ass'n; the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida; and the State Plant Board of Florida.

Shipments, unloads and other similar data for the 1958-59 season are subject to revision on account of late & corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary which will be of most value to the Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1958-59 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 22, 1958 to June 10, 1959, inclusive

GENERAL COMMENTS

Florida's 1958-59 citrus season established all kinds of all-time records. To begin with, more grapefruit was shipped fresh from the State than oranges. Then, the seasonal orange prices were the highest recorded at all levels - beginning with the 1919-20 season. Grapefruit and tangerine returns did not match oranges in relative prices, but still it was one of the highest priced seasons in the past thirty-odd years for these two classes of citrus. There was active 'on tree' buying of oranges beginning in July and it continued through the entire 1958-59 season. The seasonal delivered cannery price of oranges for frozen concentrate was $3.49616 per box and the quantity processed was extremely heavy. The total volume of 79,910,670 gallons of frozen concentrated orange juice was another all-time high. Chilled juice products continued to show an increase, with well over seven million boxes of citrus utilized. More than 6,000,000 boxes of oranges went directly into chilled orange juice alone.

In contrast, shipments of fresh oranges from the State by rail, boat, truck and express, were the lightest since the 1929-30 season. Fresh fruit handlers participated in approved practices from 'tree to box' in an effort to halt the downward trend in fresh fruit consumption, especially oranges. There was also more emphasis on fresh exports than ever before, particularly promotional and advertising work. Among the newer packing house practices on the increase was the hydrocooling of citrus, oranges in particular, and packaging in polyethlene bags. There were four large packing houses using this newer method of handling in 1958-59 and additional ones have installed the necessary equipment for the 1959-60 season. Along these same lines, was the continuing trend towards the use of the 1/2 box or 4/5 bu. size containers - both wirebound boxes and corrugated cartons. Another history making development at the close of the 1958-59 citrus season, was the multi-million dollar advertising program set up to stimulate the sale of frozen orange concentrate during September, October and November, 1959 - financed by all producers of this product. This campaign was in addition to other normal industry advertising programs.

Weather-wise, the 1958-59 Florida citrus season was relatively warm when compared to recent previous years, but there was excessive rainfall. Precipitation in March, 1959 was particularly heavy throughout the entire citrus belt. Not since 1949-50 was the volume movement of fresh grapefruit so late starting. Only a few cars were shipped during the last week in September, but the movement picked up sharply and, by the middle of October, the weekly movement of grapefruit, by all carriers, totaled well over 600 cars. The first orange shipments moved from the State the week ending Oct. 11th. With negligible weather hazards during the 1958-59 season, Florida's shipments of oranges and grapefruit again extended through the month of June in considerable volume and continued in a light way during July and August.

The preliminary production figures (July, 1959 estimate by the Crop Reporting Board of the U. S. Department of Agriculture) placed Florida's orange crop at 86,500,000 boxes, tangerines at 4,500,000 and grapefruit at 35,200,000 for a grand total of 126,200,000 boxes of citrus. Temples made the best showing with the heaviest production figures on record, but early and mid-season orange figures were the lowest since the 1952-53 season. Valencias showed an increase of approximately 10,000,000 boxes over the 1957-58 light crop (due to freeze), but the production was in line with the average of the previous five years. Tangerines were slightly under the average for the past ten years and indicated a rapid recovery from the 1957-58 low. There was the least variation in the grapefruit production figures in 1958-59. The average of the combined seed and 'other' (generally Duncans) was about 1,500,000 boxes under the previous five year average of 36,720,000 boxes. No comparisons on citrus plantings for the year ending June 30, 1958 have been attempted, due to adverse weather conditions during the 1957-58 season.

Florida's citrus shipments in 1958-59 present a discouraging trend from a fresh fruit standpoint. The total orange movement from the State of only 26,419 cars by all carriers and including the percentage of 'mixed' cars, was the lowest in the last twenty three years, or since the practice of including the proper proportion of 'mixed' citrus was started in 1936-37. This total is less than one-half the amount shipped fresh in some of the previous heavier years. Even as recently as 1953-54 - when over 65,000,000 gallons of frozen concentrate orange juice was produced in the State and there were only 5,000,000 boxes more in the final production figures, Florida shipped over 50,000 cars of fresh oranges. However, the straight rail shipments of Florida and California illustrate an interesting correlation in fresh fruit consumption. During 1958-59, with California's pronounced increase in orange production, their rail shipments increased approximately one-third - while Florida, with less proportionate increase in production - shipped about one-third less number of cars. Notwithstanding the increase of processed in all forms, the decrease in Florida's fresh orange shipments was more pronounced than there apparently would be justification for. Florida's grapefruit shipments, while exceeding oranges in fresh fruit volume for the first time, accounted for no outstanding total. For the seven preceding seasons, the fresh shipments of grapefruit from the State exceeded those of 1958-59 in six out of the seven years. Tangerines were somewhat similar to grapefruit in that recent previous seasons were somewhat heavier than 1958-59. The one exception in tangerines was the 1957-58 season when cold damage severely cut into the normal volume. The percentage of Florida citrus moved by truck in 1958-59 was practically identical with that of 1957-58 or a plus 61 per cent of the total fresh movement.

Seasonal auction averages for Florida citrus in 1958-59, either set an all-time record - as was the case with oranges - or were in the top brackets of averages for the past forty years. Oranges, with a seasonal average of $6.08 per 1 3/5 bu. box, was the highest on record or beginning with the 1919-20 season. The grapefruit average - while not the highest on record - was one of the six highest seasons on record. Tangerine auction records are of slightly less duration or since 1927-28. During this period, there were only four seasons with a higher seasonal auction average than 1958-59. Temples, which have been separated from oranges only in recent seasons - or since 1949-50 - had the second highest seasonal average in this span or $3.08 per 4/5 bu box in 1958-59 compared to $3.13 in 1957-58 and also an identical seasonal average in 1949-50. For oranges, taking the season as a whole, the weekly averages held up exceedingly well throughout the entire season, with the highest prices reported either early in the season or at the close. However, any declines were relatively minor for any prolonged period. Temples showed considerably more pronounced price flucuations than either Interior or Indian River oranges. The grapefruit weekly auction averages were more indicative of the customary trends than oranges, but still the averages were relatively high compared to most previous seasons.

The delivered cannery prices were very indicative of the 'red hot' orange market prevailing through the entire 1958-59 season. The concentrate orange price started off the season at better than $3.00 and only dropped under the $3.00 price for a couple of weeks the last of November and the first week in December, 1958. There were three weeks the first part of January, 1959 when again the delivered price was pennies under $3.00. The average for the season was $3.49616 compared to $2.54761 in 1957-58. The juice price for oranges delivered cannery for the season was $3.10678 compared to $1.16390 for 1957-58. The cannery grapefruit price on juice average $1.03844 in 1958-59 compared to .79179 a year ago, while sections averaged $1.41298 compared to $1.07906 in 1957-58. Tangerines delivered cannery averaged $1.03241 in contrast to .47442 the preceding season.

The 1958-59 combined cannery utilization of Florida citrus approached the 90,000,000 box mark. Through July 31, 1959, oranges accounted for 68,521,132 boxes, grapefruit 18,547,566 and tangerines 1,597,359 boxes - the largest volume on record for both oranges and tangerines. During the peak periods, 3,000,000 boxes and more per week for oranges was the rule rather than the exception. There were three weeks in January and the same number in February and again in May, when more than 3,000,000 boxes of oranges were used weekly. The peak week of the season was the one ending May 9th when nearly 3,500,000 boxes were used, or 3,403,387. The second highest week was on midseason fruit or the week ending Feb. 14th with 3,369,477 boxes accounted for. Grapefruit useage was fairly consistent, with the peak weeks Mar. 14th and Mar. 28th - or between seasons on heavy utilization of oranges. The peak grapefruit week was the one ending Mar. 28th when nearly 1,500,000 boxes were used, or 1,456,540. The utilization of both oranges and grapefruit extended through July in light volume. However, with oranges nearly 2,000,000 boxes were used as late as the week ending June 14th. The tangerine utilization accounted for nearly 1.6 million boxes. Peak weeks for the season were just prior to the holidays and through January and the early part of February. The heaviest utilization for any one week was the one ending Jan. 10th with 207,843 boxes used.

Florida citrus in fresh form, was again distributed to practically every state in the Union, Canada and many foreign countries. Actual rail unloads in 100 U. S. Cities - Sept. 1, 1958 thru July 31, 1959 - totaled 4,978 cars of oranges, 7,517 grapefruit, 1,327 tangerines and 2,844 cars of 'mixed' citrus - for a grand total of 16,666 cars. Actual truck unloads in 39 of the large U. S. markets were 9,193 carlot equivalents of oranges - 9,562 grapefruit - 1,936 tangerines and 372 'mixed' citrus - for a grand total of 21,063 cars. Complete interstate truck distribution for the period Sept. 1, 1958 thru May 31, 1959 (as tabulated by the Florida Citrus Commission from the State's gateway truck passing reports) accounted for the equivalent of 15,575 cars oranges, 17,419 grapefruit and 2,925 tangerines for a total of 35,919 cars, including Canadian points. In this complete interstate truck distribution report, the very wide distribution of Florida citrus can be noted inasmuch as 46 States, the District of Columbia and many provinces of Canada received Florida citrus during the 1958-59 season. In the rail unloads, wide distribution in volume quantities can be noted in such cities as Portland, Oreg., with 7 oranges, 97 grapefruit, 8 tangerines and 2 mixed citrus. Seattle, Wash., received 13 cars of Florida oranges, 194 grapefruit and 27 tangerines. In truck unloads, Denver accounted for 37 carlot equivalents of Florida oranges, 261 grapefruit and 41 tangerines. In Los Angeles, truck unloads of Florida citrus amounted to 4 cars oranges, 96 grapefruit and 11 tangerines. These were just a few of the many examples of quantity distribution of fresh Florida citrus to far distant points.

See Page No. 59 - for l. c. l. shipments of 'mixed' cars via express
and average rail load of Florida citrus 1958-59 season.

Character of the 1958-59 Season

The 1958-59 season, as compared to previous seasons, was relatively warm with excessive rainfall. Cold damage to citrus was generally light. The first cool weather of the season occurred in the north portion of the State on Nov. 22nd, but freezing temperatures did not occur until Nov. 30th - and it wasn't until Dec. 13th that freezing occurred generally over all the northern districts. In the central districts, freezing temperatures were confined to a few of the colder locations during December and it was not until Jan. 11th that the first general freeze occurred in this area, which was the first freeze of the winter for the Everglades. It was not until Jan. 18th that the Lower East Coast experienced their first freezing temperature. With two major and several minor outbreaks of cold air, January was the coldest month of the season. The first of these occurred on the 11th and 12th, and the other during the period from the 17th thru the 19th. The majority of the lowest temperatures for the season was reported on Jan. 11, however, some occurred on various other nights during the two periods. February and March were rather warm with only a few minor cold outbreaks in the north and central districts. However, freezing did occur in the southern districts on Mar. 3rd.

The rainfall from October, 1958 through July, 1959 - for most of the State - was very heavy, with many areas collecting much more than a normal year's supply during the 10 month period. Nearly all stations, in the main citrus producing areas, recorded the heaviest rainfall of record for March, which was also true for April - but at a lesser number of stations.

Unclassified Citrus- calamondin, citron, miscellaneous limequats, shaddock and other citrus 2,806

Compiled by the Department of Agricultural Economics - Agricultural Experiment Station - University of Florida - Gainesville, Florida

L. c. l. shipments of 'mixed' cars (consolidated into carlots) via express totaled 6,438 cars of citrus for the 1958-59 season.

The average rail load of Florida citrus for the 1958-59 season (as compiled by the Florida Citrus Exchange at Tampa, Florida) was 516.6 boxes.
Segregated: 1958-59 season - oranges 511.8 - grapefruit 518.5 - and tangerines 522.6.

The conversion factor of 500 boxes -- used in converting truck shipments to carlots.

CITRUS SHIPPING HOLIDAY - "This regulation will prohibit the shipment of of any oranges, grapefruit, tangerines and tangelos between the production area and any point outside thereof in the continental United States, Canada or Mexico for the period beginning at 12:01 a/m, e.s.t., Dec. 23, 1958, and ending 12:01 a/m, e.s.t., Dec. 30, 1958."

By Marketing Agreement Committees,
Lakeland, Florida.

Detailed auction data for California citrus for the 1958-59 season may be obtained from the Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles 21, California.

Commercial shipments of citrus from Texas continued light in 1958-59.
L. c. l. shipments of 'mixed' citrus via express from Texas totaled 424 cars.

1959/60

FOREWORD

The information contained herewith has been compiled from the daily citrus bulletins issued at Lakeland, Florida and from various reports released by the Agricultural Marketing Service; the Foreign Agricultural Service; the Citrus Inspection Division, Florida Department of Agriculture; the Federal-State Frost Warning Service; the Florida Citrus Commission; the Florida Citrus Exchange; the Florida Citrus Mutual; the Florida Canners' Ass'n.; the Department of Agricultural Economics, Agricultural Experiment Station, University of Florida; and the State Plant Board of Florida.

Shipments, unloads and other similar data for the 1959-60 season are subject to revision on account of late and corrected reports which are not yet available. Again, as in previous years, every effort has been made to include data in the annual citrus summary, which will be of most value to the Industry. We have endeavored to include basic statistics suitable for comparisons with past seasons.

MARKETING FLORIDA CITRUS
SUMMARY OF 1959-60 SEASON

Daily market reports on citrus were issued at Lakeland, Florida
from October 14, 1959 to June 13, 1960, inclusive

GENERAL COMMENTS

A very noteworthy development, during the 1959-60 Florida citrus season, was a reversal of recent years continued decline of fresh fruit shipments. Approximately 5,000 more cars were shipped fresh from the State than in 1958-59. The continued and persistant attention to and emphasis on fresh fruit problems resulted in the formation of the much discussed and urgently needed active organization of fresh fruit handlers. This was accomplished by cooperation of all segments of the industry- growers, shippers and processors. An unique multi-million dollar advertising program for frozen orange concentrate (financed by all producers of this product & conducted in addition to the regular Florida Citrus Commission's advertising) was extended into December. Results, as manifested by the record breaking consumption, were most gratifying and continued to be felt throughout the remainder of the season. Weatherwise, there was a cold snap in November, one in January, and another in February. Rainfall was above normal in the State during most of the season, but particularly in the months of October and March. The State's citrus production was the highest on record for some varieties and on one the lowest in more than two decades. Prices were varied, but generally were not as high as in 1958-59. Some classes were higher however. More volume and keener competition were experienced from Arizona and Texas citrus, particularly the former. Volume shipments from the State were reached comparatively early, but the season's wind-up was the earliest in recent years, especially for grapefruit and tangerines. In processing, the production of the all-important frozen orange concentrate was slightly less than the previous season, which set a record. Chilled orange juice, sections and salads continued a steady and consistent advance. The percentage of Florida citrus moved by truck increased 5 per cent.

The preliminary production figures (July, 1960 estimate by the Crop Reporting Board of the U. S. Department of Agriculture) placed Florida's orange crop at 91,500,000 boxes, tangerines at 2,800,000 and grapefruit at 30,500,000 - for a grand total of 124,800,000 boxes of citrus. Valencias made the best showing with the highest production ever attained and likewise Temples. The tangerine figure, however, was the lowest in 18 years, with the lone exception of the freeze season, 1957-58. Early and mid-season oranges, while exceeding the 1958-59 crop, were still less than the heavy production years of 1953-54 through 1957-58. Duncan or seedy grapefruit production was very light, or the smallest in the past 20 years. Seedless grapefruit was slightly heavier than 1958-59, but below the heavy production years of 1953-54 through 1956-57.

Plantings of citrus trees in the State for the year ending June 30, 1959 were exceedingly heavy, as would be expected following the 1957-58 freeze season. Combined total plantings were at an all time high, or since these records have been kept - beginning with the season 1928-29.

Total fresh shipments of Florida oranges, grapefruit and tangerines, by all carriers (including the proper proportion of 'mixed' cars), amounted to 67,571 cars compared to 62,361 for 1958-59, or an increase of exactly 5,210 cars. Oranges, with the proper proportion of mixed cars, totaled 33,865 cars in contrast to only 26,363 the preceding season. Grapefruit shipments were slightly less than the previous year, or 29,663 compared to 30,531 - a decrease of 868 cars. Tangerines, with a very light crop, showed a sharp reduction in shipments, or 4,043 cars contrasted to 5,467 in 1958-59 for a decline of 1,424 cars. With the relatively light crop of both grapefruit and tangerines, oranges easily led in shipments. In fact, there were more oranges shipped from the State than both grapefruit and tangerines combined. The percentage of Florida citrus moved by truck increased again slightly in 1959-60 over the previous season, or there were approximately 66 per cent by truck and 34 per cent via rail. Oranges, by truck, were better than 2 carlot equivalents to 1 - while grapefruit and tangerines were less than this proportion.

The 1959-60 seasonal auction averages for Florida citrus were again in the high bracket and approached the all time records for oranges, grapefruit, Temples and tangerines. There were approximately 100 more cars of oranges sold at auction than in 1958-59, and the average prices was .76¢ lower per box, when an all time record was set a year ago. 3,078 cars of Florida oranges were sold at an average of $5.32 per 1-3/5 bu. box. Grapefruit averaged .02¢ per box more than in 1958-59, with the light crop volume down approximately 1,000 cars or 4,941 cars averaged $4.41 per 1-3/5 bu. box. The average for Temples of $3.08 per 4/5 bu. box was exactly the same as for the previous season, or the equivalent of $6.16 per standard box. The volume of Temples sold at auction was slightly higher than in 1958-59. Tangerines sold extremely well, or nearly $1.00 per 1/2 box higher than the preceding season and just a few pennies under the all time high of the freeze year, 1957-58.

The 1959-60 combined cannery utilization, as compiled by the Florida Citrus Commission, was less than 3,000 boxes under 85,000,000 boxes - or oranges 70,164,561 - grapefruit 14,291,986 and tangerines 541,256. Oranges, with 70 million plus boxes, broke all records and was the largest volume ever utilized. Again, as in 1958-59, 3 million plus was routine during the peak weeks for orange utilization. Beginning, with the week ending Jan. 3rd, there were 5 consecutive weeks exceeding the 3 million box mark - with the peak week of the season during this period, or the week ending Jan. 16th with 3,824,202 boxes used. Following the 3 million plus box week ending Feb. 13th, there was a very sharp reduction in the volume utilized, due to the 'in-between' period following the clean-up of mid-season oranges and before the concentrators were in volume operation on Valencias. During this lull, the low spot was the week ending Mar. 19th, when less than 1/2 million boxes were used. Following this date, there was a gradual and consistent increase until the week of Apr. 30th, when again over 3 million boxes were used. This volume pace continued above the 3 million box mark for 5 weeks or through May 28th. Then there was a sharp decline. By the latter part of June, only around 150,000 boxes were utilized for the week ending June 25th. For grapefruit, the 1,000,000 box figure weekly was never reached in 1959-60. The peak week of the season was the one ending Feb. 27th, with 959,885 boxes used. The heavy grapefruit utilization period was beginning the week ending Jan. 9th and extending through the week of Mar. 5th, when the weekly volume ranged from slightly over 600,000 boxes to the peak week of the season. Tangerines, with the light crop, totaled only approximately 1/3 of the 1958-59 utilization. There was only 1 week, which exceeded 100,000 boxes - or the week ending Dec. 19th, 1959, when 104,274 boxes were used.

The delivered cannery prices, furnished by the Florida Canners' Association, were lower in most brackets than for the previous season - with the exception of grapefruit sections which were higher. The concentrate orange price ranged from slightly below $2.00 delivered cannery to a peak price of over $3.00 for the week ending June 11th. The price was generally around $2.00 up to the first of the year, then increased to $2.89076 at the close of the mid-season oranges, or the week ending Feb. 20th. Immediately following Feb. 20th and for the better part of 3 months, the price was around $2.50 delivered. The top prices of the season were in June, with the average for the season $2.53841. Oranges for juice ranged from a low of $1.51032 for the week ending Nov. 21st to a top of $2.46961 for the week ending June 4th, with the seasonal average $2.01367. Grapefruit for juice, during the season, was almost identical with a year ago, or a seasonal $1.02302 average compared to $1.03844 in 1958-59. The low mark for grapefruit juice was $0.41316 during the week ending Oct. 3rd, and the high was during the week ending Feb. 27th with $1.26506. Grapefruit for sections was the most consistent of all citrus, or above $1.50 delivered, with one exception - or the week ending Oct. 31st at $1.34220. The seasonal average was $1.54113. Tangerines for juice varied from a low of $0.70982 for the week ending Nov. 28th to a high of $1.32528 for the week ending Jan. 30th. The seasonal tangerine juice average was $0.83664 delivered.

The 1959-60 frozen concentrated orange pack was the second highest in Florida's history, or 78,149,306 gallons compared to the all time high of 79,910,670 in 1958-59. Chilled orange juice, together with chilled orange sections and salads, continued to advance in volume. Chilled orange juice accounted for over 7 million field boxes during the 1959-60 season and chilled orange sections and salads alone approached 700,000 field boxes. The number of field boxes of grapefruit used for chilled grapefruit sections and salads was approximately 1,000,000.

In 1959-60, Florida citrus, in fresh form, again enjoyed wide distribution - in fact to practically every State in the Union, the District of Columbia, Canada and many foreign countries. Actual Florida rail unloads in 100 U. S. Cities for the period Sept. 1, 1959 through July 31, 1960 - totaled 6,170 cars of oranges - 6,756 grapefruit - 838 tangerines and 2,977 'mixed' cars of citrus - for a grand total of 16,741 cars. Actual Florida truck receipts were obtained on a total of 40 large U. S. markets and amounted to 11,618 carlot equivalents of oranges - 9,877 grapefruit - 1,586 tangerines and 220 'mixed' cars of citrus - for a grand total of 23,301 cars. In addition, rail unloads in 5 leading Canadian markets totaled 119 cars of Florida oranges, 370 grapefruit, 12 tangerines and 4 'mixed' cars of citrus. Truck receipts of Florida citrus in the same Canadian markets totaled 697 carlot equivalents of oranges - 1,688 grapefruit - 110 tangerines and 4 'mixed' citrus. The grand total of actual Florida rail unloads and truck receipts at the above mentioned markets amounted to 43,046 cars or 64 per cent of all rail, boat and truck shipments. To supplement this information, complete interstate U. S. and Canadian truck distribution for the period Sept. 1, 1959 through May 31, 1960 (as tabulated by the Florida Citrus Commission from the State's Department of Agriculture gateway truck passing reports) accounted for the equivalent of 20,750 cars of oranges - 18,018 grapefruit and 2,410 tangerines - for a total of 41,178 cars. These 41,178 cars accounted for approximately 92 per cent of the Florida truck movement in 1959-60 season. In this truck distribution data, the very wide distribution of Florida citrus can be noted, in as-much as 45 States, the District of Columbia and many cities throughout Canada received Florida citrus via truck during the 1959-60 season. In the rail unloads, Florida receipts in volume quantity, were noted in such distant points as Portland, Ore., and Seattle, Wash. Truck receipts to distant points were even more outstanding. In Los Angeles, Calif., the equivalent of 17 cars of Florida oranges, 183 grapefruit and 4 tangerines were received. Houston, Tex. received 68 cars oranges, 22 grapefruit and the same number or 22 tangerines. Denver, Colo. accounted for 58 carlot equivalents of Florida oranges, 222 grapefruit and 43 tangerines.

See Page No. 59 - for l. c. l. shipments of 'mixed' cars via express
and average rail load of Florida citrus for the
1959-60 season.

Character of the 1959-60 Season

The weather for citrus was generally favorable. Below freezing temperatures, however, occurred nightly from Jan. 20th through the 25th, and caused some damage to tender citrus growth and fruit in most all areas of the State in the unprotected colder groves. Also, unprotected young trees in the colder locations received rather severe damage by the January cold after minor damage from the below freezing temperatures on Nov. 30th. Rainfall, for the second consecutive October thru July period, averaged much above normal. Excessive rains in October, March, July and to a lesser degree in June, caused flooding, which damaged some trees. During the months of December, February and April, rainfall was spotted and light, but moisture was adequate - November, January and May, however, were generally dry.

The 1959-60 winter season was a very disastrous one for the growers of tender crops in peninsular Florida. Excessive rains in September, October and November flooded many of the fields in central and southern Florida, causing rather heavy losses and retarding growth and delaying planting of many fields. Then the rains in mid-March - which ranged from 10 to near 20 inches in some areas of central Florida, 5 to 12 inches in north Florida, caused additional damage by flooding. Vegetables, flowers and ornamentals were plague by frequent cold weather with frosts from Nov. 30th to as late as Mar. 23rd.

Total		29,762

Unclassified Citrus- calamondin, miscellaneous limequats, shaddock and other citrus 6,054

Compiled by the Department of Agricultural Economics - Agricultural Experiment Station - University of Florida - Gainesville, Florida

L. c. l. shipments of 'mixed' cars (consolidated into carlots) via express totaled 5,470 cars of citrus for the 1959-60 season.

The average rail load of Florida citrus for the 1959-60 season (as compiled by the Florida Citrus Exchange at Tampa, Florida) was 511.2 boxes. Segregated: 1959-60 season - oranges 507.7 - grapefruit 514.5 - and tangerines 494.4.

The conversion factor of 500 boxes -- used in converting truck shipments to carlots.

CITRUS SHIPPING HOLIDAY - "This regulation prohibits the shipping and packing of all varieties of oranges, grapefruit, tangerines and tangelos between the production area and any point outside thereof in the continental United States, Canada or Mexico for the period beginning at 12:01 a/m, e. s. t., Dec. 23, 1959 to 12:01 a/m, e. s. t., Dec. 30, 1959."

Shipments exempt from these regulations:

Express shipments of the gift package type.
Exports to foreign countried other than Canada or Mexico.
Shipments for use within Florida, except shipments west of the Suwannee River.
Shipments for canned or frozen products or beverage base.
Shipments for charity or Government relief.

By Marketing Agreement Committees,
Lakeland, Florida.

Detailed auction data for California citrus for the 1959-60 season may be obtained from the Federal-State Market News Service, 300 Wholesale Terminal Building, Los Angeles, California.

Commercial shipments of citrus from Texas were considerably heavier in 1959-60. L. c. l. shipments of 'mixed' citrus via express from Texas totaled 427 cars. Additional information on Texas citrus may be obtained from R. E. Winfrey, Market News Service, U. S. Dept. of Agriculture, P. O. Box 13, Weslaco, Texas.
